

Stronger Security, Greater Protection: Multi-Factor Authentication is Here

Enhanced Security Initiative

Carlisle Medical is excited to announce a major security upgrade to our client portal, Carlisle Connect. To better protect our customers and their data, Carlisle Connect will be transitioning to Multi-Factor Authentication (MFA), adding an extra layer of security to every login.

How Multi-factor Authentication Works

Carlisle Medical is committed to providing a seamless and secure online experience for our clients. With the growing importance of cybersecurity, MFA ensures that only authorized users can access their accounts by requiring a second form of verification, such as a unique code sent to their mobile device or email.

How Multi-factor Authentication Works

Starting soon, all Carlisle Connect users will be required to set up MFA when logging in. This quick and easy process will provide greater protection against unauthorized access, ensuring that accounts and transactions remain secure.
